

To support our team in Mertert (Luxembourg), Worms (Germany), Castellón (Spain), or Maidstone (United Kingdom)*, we are hiring a

Regulatory Affairs Advisor – Advocacy

Following the recent announcement by the European Union related to the development of the Chemicals Strategy for Sustainability, in the frame of the European Green Deal, and while it continues to adapt to the requirements established in the REACH Regulation (on Registration, Evaluation, Authorisation and Restriction of Chemicals), the chemical industry is facing significant challenges that should turn it into a world leader in terms of innovation, competitiveness and sustainability. Among these challenges, one of the key objectives will be to develop the capacity to explain why, based on conclusive and reliable data, the continued use of certain chemical substances will be absolutely necessary to achieve the highest standards for the European society in terms of safety, decarbonization, sustainability and technological leadership. Frequently, those substances may be related to intrinsic properties that will make them potentially dangerous for human health or the environment. In such cases, only when an adequate risk control from the use of the substance can be demonstrated, along with a high socio-economic benefit for the community and the absence of safer and viable alternatives, the continued use of the substance should be allowed in the territory of the European Union.

We at **CHEMSERVICE** support chemical companies to define their business strategy based on the potential impact that the European regulations on chemical safety could create. Starting from the development of product defence plans, we work on the identification of the best regulatory options for substances that may entail some risks for human health and the environment. From the chemical safety assessment to the socio-economic evaluation of the industrial sectors and value chains in which the company commercializes its substances, in parallel to an analysis of potential alternative substances or technologies, we advise our customers for an optimal regulatory positioning of their business.

Due to our flat hierarchies, our efficient work processes, and the ability to react quickly and flexibly to requests, **CHEMSERVICE** has developed into one of the leading global consultancies to the chemical industry and its value chain over the past 15 years. We are committed to the professional and personal development of all our 70 employees located in Europe, South Korea, and the United States. We are constantly developing ourselves to continue to provide our clients with the best possible advice and give them a competitive edge.

If you are a professional with experience in the chemical sector, either from the technical side or from the business analysis perspective, if you are motivated in front of the possibility to collaborate in the development of a more sustainable yet highly developed society, or if you are simply looking for a turn in your career, this may be the opportunity that you are looking for...

*Depending on your profile, the possibility of a home-based position will be evaluated.

Your tasks:

- To participate in the establishment of strategies and advocacy plans to defend chemical products in front of potential regulatory impacts.
- To build technical arguments and relevant communication materials to defend the continued use of high value products in the European market.
- To develop socio-economic evaluations on chemical products, as well as on the industrial sectors and value chains in which they may be involved.
- To evaluate possible alternatives to the products handled by our customers, both from a safety perspective as well as in relation to their socio-economic impact.
- To perform market and trend analysis on the use of chemical substances in the European Union or in other regions.
- To communicate directly with key actors (customers, users, regulators) for defending the positions established in the product advocacy or defence plan.

Your profile:

- You have a degree on chemical or environmental science, engineering, economics, or a comparable educational profile.
- You are skilled in interdisciplinary and solution-oriented thinking.
- You have very good communication and presentation skills in English.
- You work in a self-dependent, reliable, and structured way.
- You are interested in new and ever-changing challenges.
- You are willing to familiarize with national and international legal requirements.

We offer:

- Becoming part of a multi-disciplinary team with a high level of expertise.
- Interesting and self-dependent tasks in an international business environment.
- A full-time, permanent contract with a competitive salary.
- Flexible working hours with the possibility to work remotely.
- Professional training and enough time to familiarize with your tasks.
- Personal development and the chance to take on responsibility.
