

February 2019

## **Establishment of new Chemservice entities in Spain, United Kingdom and USA**

Dear valued customer / business partner,

The New Year 2019 started very successfully for Chemservice. We launched three new entities – in Spain, United Kingdom and USA. With these steps, we further broaden our service portfolio to different markets and regulations. Together with our new colleagues, we can even better serve your requirements.

Our new entity Chemservice Iberia mainly takes care of Spanish, Portuguese and Italian as well as Latin American customers. Our office is based in Castellón, a strategic location closely connected to the main Spanish cities and a number of chemical clusters. We are happy to introduce Dr. Jaime Sales, who is at your disposal for requests from South-West Europe and Latin America. Jaime Sales has a PhD in chemical engineering with expertise in toxicology and business management. He has more than 15 years of experience in working with European and worldwide regulations on chemical and industrial safety. He worked for chemical industries, REACH consortia and the European Commission and has language skills in Spanish, English and Italian.

Our new UK entity is located in Maidstone, Kent, with good links to London, UK airports and high-speed trains to continental Europe. Chemservice UK Ltd. provides strategic, regulatory support to the UK chemical industry as well as suppliers to the UK market, particularly in the light of Brexit. Through our new entity, we will be able to act as your Only Representative in the United Kingdom. Herewith we can support you to be compliant with UK chemicals law and ensure that you can smoothly continue or even start your UK business. Lara Dickens (aka Hoadley) is your contact person for UK related regulatory requests. She is a chemist with more than 20 years of experience working in the chemical and metal industries and has over 15 years of experience in European regulatory affairs, including REACH, CLP, biocides and responsible sourcing/supply relating to minerals and metals.

With our new legal entity Chemservice Americas LLC in Helena (Montana, USA), we support you with technical advice on North American chemical control legislation. We assist you for example in the fields of US EPA FIFRA pesticides and Canada PMRA biocides, US EPA Toxic Substances Control Act sections 4-13, Americas GHS safety data sheets and labels as well as US food & drug administration. For any requests on North American chemical law, please contact Christy Leeper. She has a Bachelor of Science in Occupational Safety & Health with an emphasis in science & engineering and background in worker safety in commercial construction and aluminum production. Christy Leeper has over 16 years of product regulatory, health and safety experience in the fiber glass insulation manufacturing and mining industries.

We are happy to support you on your individual requirements and to receive your requests. All three new Chemservice entities are already at your disposal.

We are looking forward to support your business and to extend our successful cooperation.

Yours sincerely,

---

Dr. Dieter Drohmann  
CEO
